

VoidAlgo — security & access hygiene

Generated 28 Aug 2026, 07:40 UTC · Activity window: last 180 days · 7 repositories scanned · Run #1

The short version

- No critical or high severity vulnerabilities are currently open.
- **2 access grants look stale** — 1 of them at **admin** level. These are suggestions for human review; nothing has been changed.
- 5 people were assessed across 7 repositories. 20 access grants were deliberately held back from the suggestions — org owners, bots, allowlisted accounts, and repositories too new or too small to judge fairly. All of them are listed in section 4.

0

Critical + high, open

0

Open advisories, all severities

2

Suggested access removals

1

Of those, admin access

7

Repositories scanned

5

People assessed

1 Security advisories

Every Dependabot alert across the organization, grouped by how serious it is and whether anyone has dealt with it. **Open** means still exploitable today.

Open alerts by severity

Nothing open. Any alerts the organization has had are shown as fixed or dismissed below.

SEVERITY	OPEN	FIXED	DISMISSED
Critical	0	1	0
High	0	14	0
Medium	0	11	0
Low	0	6	0

Status of all alerts

32 alerts total.

Most affected repositories

No repository has open alerts.

Oldest unresolved alerts

Sorted by how long they have been open. These are the ones that have been ignored the longest.

Nothing unresolved.

2 Who has access, and what they did with it

One row per person per repository. **Score** combines commits, reviews and pull requests over the last 180 days, with older work counting for less. A score below **5.0** triggers a review suggestion. Repositories are ordered by how many suggestions they produced. Click any repository to expand it.

3 Suggested access removals

Ranked by **risk** = how much power the grant carries, divided by how much the person is using it. A dormant admin ranks above a dormant reader. **Nothing here has been changed** — this tool never revokes access. Every row is a recommendation for a human to confirm.

#	MEMBER	REPOSITORY	PERMISSION	LAST COMMIT	LAST REVIEW	SCORE	RISK	WHY FLAGGED	WHAT TO DO
1	fatbatman85	voice_mvp_dupe	Admin	27 Aug 2026 (0 days ago)	never	2.08	0.98	Holds admin access but has contributed only 1 commit, 0 PRs reviewed, 0 PRs merged in the last 180 days. Score 2.08 is below the 5.0 threshold.	Direct repository grant; can be revoked on this repo alone.
2	fatbatman85	Agentic-CMO	Write	27 Aug 2026 (0 days ago)	never	2.08	0.49	Holds write access but has contributed only 1 commit, 0 PRs reviewed, 0 PRs merged in the last 180 days. Score 2.08 is below the 5.0 threshold.	Direct repository grant; can be revoked on this repo alone.

4 Who was excluded, and why

These people and repositories were deliberately kept out of the suggestions above. This panel exists so the list you just read can be trusted: if you cannot see who was skipped, you have no way to know whether the tool is hiding something.

People never suggested for removal (20)

Bot or app account (1)

Sensitive_Data_Detection-Compliance_Assistant	Created 1 days ago, inside the 180-day window. Nobody has had time to build a history here yet.
demo-repository	Created 34 days ago, inside the 180-day window. Nobody has had time to build a history here yet.
github_pull_toslack	Created 1 days ago, inside the 180-day window. Nobody has had time to build a history here yet.
pseudoquant	Created 34 days ago, inside the 180-day window. Nobody has had time to build a history here yet.

Unattributed commits (6)

Commits whose author email is not linked to any GitHub account. They are counted and reported but never assigned to a person, because guessing would credit — or fail to credit — the wrong someone.

Scoring: $activity = 3.0 \cdot \ln(1+commits) + 2.5 \cdot \ln(1+reviews) + 2.0 \cdot \ln(1+PRs \text{ merged}) + 1.0 \cdot \ln(1+PRs \text{ opened})$, then halved for every 180 days since the person's last activity. $risk = permission \text{ weight} \div (1 + score)$, where admin=3, maintain=2, write=1.5, triage/read=0.5. Flagged below 5.0.

Run #1 · started 2026-08-28T07:40:53+00:00 · database keyed on GitHub IDs, so re-running updates this report in place rather than duplicating it. Access removal is always a suggestion, never an automatic action.
